

# FORTIUSONE

Visual Intelligence, Smarter Decisions

## FortiusOne provides rich, dynamic Visual Intelligence

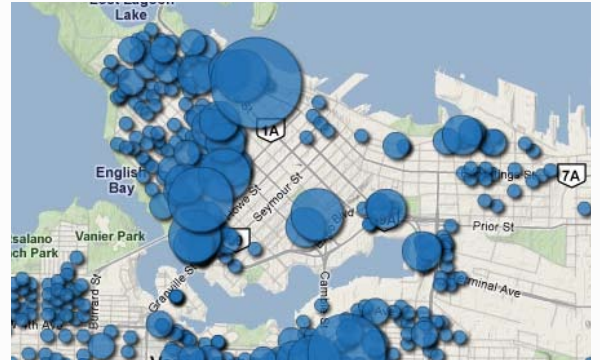

By delivering easy-to-use, browser-based solutions, FortiusOne makes it possible to visualize and analyze massive amounts of data, make decisions and solve problems with no prior training or experience using traditional mapping tools.

### Are you effectively leveraging your business information?

Executive decision makers have vast amounts of internal and external business intelligence available to them, but need to quickly understand the trends, opportunities, anomalies and threats contained in that data to make the best decisions.

### The Power of Visual Intelligence

Visual Intelligence is rich, dynamic and actionable information. Developed by integrating location-based data with a company's own internal business intelligence, it renders an easily interpreted format that enables stakeholders across your enterprise to gain the insight needed to make critical and essential business decisions.

By using the most advanced technology and an extensive range of economic, political, environmental and geographic data sources to deliver real-time dynamic geospatial representations,

**FortiusOne is the world's leader in developing Visual Intelligence for commercial enterprises and government agencies.**

**GeoIQ for Small Business** is a comprehensive solution for small and medium-sized businesses that includes the hosting and management of GeoIQ in a secure online environment. This complete solution is designed to scale with you and your business.

GeoIQ for Small Business provides a private virtual server to small and midsize businesses to enable a complete geospatial workflow and infrastructure. The total cost of ownership (TCO) is drastically less than the current geospatial server market and provides a richer set of functionality to API developers looking to empower their users and clients with Visual Intelligence.

GeoIQ for Small Business can be made available in a fraction of the time required to deploy a traditional solution. There is no waiting for hardware procurements or installation. Users throughout your business can be leveraging the power of Visual Intelligence almost immediately, not next week or next month.

### APIs & Integration Tools

APIs are available with each GeoIQ product as well as the public GeoCommons Community. With the GeoIQ and GeoCommons application programming interfaces (APIs) and simple integration tools, web developers can easily build web applications to enable data management, visualization, and collaboration within your organization and existing processes.
